ALVEOLAR BONE GRAFTING IN CLEFT PATIENTS

LAP Lambert Academic Publishing Mai 2016, 2016. Taschenbuch. Book Condition: Neu. 220x150x12 mm. This item is printed on demand - Print on Demand Neuware - Cleft lip and palate deformities occur in high frequency throughout the world as compared with other congenital malformations. A deficient maxilla is one of the most common skeletal problems in cleft patients in which dental development is also impaired. Orthodontic treatment may be necessary at different stages of the cleft patient's dental and skeletal development. The goals of orthodontic treatment are different at each stage, including both functional and esthetic corrections by means of maxillary expansion, arch alignment, and growth modification¹. For the orthodontist to achieve adequate maxillary arch width and dental alignment, the bony defect should be filled by bone grafting. The corollary is that absent bony tissue should be replaced by bone. Bone when placed subperiosteally provides a lattice or matrix for new bone formation and remodelling. It is this dynamic property of bone with its regenerative capacity that makes the biology of bone grafting so fascinating to the reconstructive surgeon. 208 pp. Englisch.
