STANDARD AND COMMERCIAL POULTRY CULTURE BY ARTIFICIAL PROCESS OR, HOW TO MAKE POULTRY CULTURE PROFITABLE

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 54 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1885 Excerpt: . . . the comparative dietetic value in each direction and the chemical composition of different grains in building up the animal organism. With such facts before us we have only then to comprehend what condition we require in our stock to best promote our purpose, and then select such diet as the following formula suggests as best adapted to induce that desired condition. From the above, chemical science assures us that wheat is richer in nitrogenous material, or flesh and muscle matter than any other grain by about 30 per cent. The minerals, such as lime, soda and potassa obtain largest in oats and barley, while corn and rice represent most prominently the oil and fat producing diet. Hence the scientific deductions that accord with all experience, teach that young chicks should first be feed on wheaten bread and later with fine cracked wheat. Why Because such is by far the most nourishing diet. What then, is the condition of the chick The yolk of the mother egg, which represents 30. 7 per cent of fat, is yet not fully absorbed and digested. It, therefore, needs no fat producing food, rather under such conditions, the tender life most needs such food as will soonest make it muscle and strength and flesh instead of fat. When eggs are fed avoid the yolk; but the white of eggs and welldrained milk curd and fine chopped, lean meat and white bread and fine crushed wheat all belonging to that class of...
